

Foxylight Magnetic Smartphone Holder

1.1 Smartphone sizes

Swiss Engineering: Foxylight is designed to fit 99.99% of all smartphone types and sizes, accommodating widths up to 95mm [3.75 inches]. While most smartphones are only 75mm [2.95 inches] wide, it is recommended to remove phone covers for a better fit, as some covers are too thick. To insert your smartphone into the holder, gently pull one side of our Foxylight holder while placing the smartphone on the other side. This ensures a secure and snug fit on the magnetic white steel plate.

1.2 Stretching our Foxylight holder

To fit your smartphone in the holder, simply pull one side of the holder while placing the smartphone on the other side. This allows for a secure and snug fit.

1.3 Sliding Foxylight Holder into position

If our smartphone holder does not securely adhere to the white magnetic metal plate or can be easily moved, clean the lower side of the holder and the magnetic side of the Foxylight with water. Avoid using soap as it contains grease, which can increase sliding. Additionally, do not use alcohol to clean the white magnetic steel panel side, the light panel side, the black keypads, the display, or our Foxylight holder, as it can damage the parts.

1.4 Foxylight holder: Built-in Magnets

Foxylight features built-in magnets that securely hold your smartphone on the magnetic steel panel side, providing stability for capturing amazing pictures and videos. Please avoid placing the holder in your shirt pocket if you have a pacemaker and keep credit cards or memory sticks away from the magnetic smartphone holder to prevent any interference or damage.

1.5 Removing Foxylight Smartphone Holder

To remove your smartphone from our Universal Magnetic Foxylight Smartphone Holder, simply place it on a flat surface like a table. Press your thumb and index finger simultaneously on both sides of the holder, specifically on the white Foxylight logos, and your phone will be effortlessly released directly into your hand. Use your fingers to test the optimal pressure strength to find the best variation for you. Additionally, our holder can be attached to any magnetic material, including many refrigerators.

1.6 Multifunctional small steel box

Our Foxylight holder fits best diagonally in the magnetic box, which serves multiple purposes. The holder can also be used to push it into the center opening, with the bottom facing the light panel side, allowing for the attachment of both the holder and mirror on that side.

Foxylight Keypad and Battery

2.1 Intuitive buttons

The Foxylight Keypad features only 5 buttons, making it easy for everyone to navigate and find the perfect light settings. You can either click the buttons step by step or press them to

FAQ and headlines. AI optimized with ChatGPT

quickly adjust the Lux (brightness) or Kelvin (color temperature).

2.2 Lux and Kelvin

Lux adjusts brightness (sun icon) for lighting conditions. Kelvin controls warmth or coolness (thermometer icon) for ambiance. Foxylight ProMax AluPlus: Lux range 5-1000, Kelvin range 3000-6500.

2.3 Adjusting light

To adjust the light on Foxylight, simply press the buttons on the keypad click by click or press them down for faster light adjustment. You can increase or decrease the brightness (Lux) and adjust the warmth or coolness (Kelvin) to achieve the perfect lighting for your needs. Experiment with different settings.

2.4 Display information

The display on Foxylight ProMax AluPlus provides three lines with key information: Lux and Kelvin settings on the first two lines. On the third line, you can see how much the battery is charged in percentage, if the cable and charger are plugged-in during use or if the device is in the standby mode to save battery power.

2.5 Foxylight Standby mode

To activate standby mode, briefly press the On/Off button. Once active, it will be displayed on the screen. The light setting is saved if Foxylight was on for more than 15 seconds. Press briefly again to turn on the light.

Accessories

4.1 Magnetic Smartphone Holder

Our Foxylight magnetic smartphone holder set includes the magnetic smartphone holder, holder box, and table stand. The holder securely attaches your smartphone to the magnetic steel plate side of Foxylight, providing stability and convenience. Amplify your content creation with this versatile set.

4.2 Magnetic Holder Box

The small box is magnetic, allowing our holder and mirror to easily attach to the bottom side of the box when it is pressed into the opening towards the light panel side. This enables you to securely attach your smartphone in our Foxylight holder for stunning selfies and seamless video calls with the perfect light setting. Additionally, the box conveniently stores our holder diagonally and the black table stand (black ring), keeping everything organized in one place.

4.3 Magnetic Mirror

The back of our Foxylight Mirror is magnetic and can be easily attached by snapping it onto the Foxylight light panel side when the steel box is in the center opening. Slide the mirror up and down on the small magnetic box bottom side to find the most convenient position.

4.4 Table Stand

Our Swiss-engineered table stand is highly useful, designed to securely hold the Foxylight in an upright position. It is ideal for video calls with your smartphone or when placed on a table next to your computer screen, providing perfect side lighting for a professional look. To use

FAQ and headlines. AI optimized with ChatGPT

the table stand, hold it in your palm and take the FoxyLight. Tilt it slightly forward to fit it into the two side openings. This action positions the FoxyLight at a slight angle towards the front, ensuring a proper fit when tilted back.

4.5 Charger and Cable

Fast charge your FoxyLight from 0% to 100% in just 180 minutes with our premium cable and wall charger, compared to 360 minutes. Other cables and chargers can be used, but they may not support fast charging. Please keep in mind that the battery may display 100% charged even when it's only charged to 75%. As a rule of thumb, each minute of charging gives you approximately 45 seconds of light.

FoxyLight Mobile Soft Light and Magnetic Smartphone Holder

The FoxyLight Holder is ingeniously designed to accommodate a wide range of smartphone types and sizes, showcasing Swiss engineering precision. It fits 99.99% of smartphones, including widths up to 95mm. Most smartphones on the market are typically 75mm wide, but it is recommended to remove any covers for a better fit, as some covers may be too high.

Stretching the holder is effortless. Simply pull one side of the holder while placing your smartphone on the other side, ensuring a snug and secure fit. This user-friendly feature guarantees that your device is held firmly in place, even during capturing unforgettable moments.

Sliding into position is a breeze. The FoxyLight Holder magnetically attaches to the white metal side where the black keypad with buttons is located. This swift and intuitive mechanism saves you time and effort, allowing you to instantly begin capturing amazing pictures and videos.

Built-in magnets within the holder provide enhanced stability, ensuring your smartphone stays securely in place as you unleash your creativity. With this reliable support, you can have peace of mind knowing that your device is firmly held, enabling you to focus on capturing stunning shots.

The multifunctional box adds versatility to the FoxyLight Holder. It fits best diagonally in the magnetic box, serving multiple purposes. Additionally, the magnetic box can be used to push the holder into the center opening, with the bottom facing the light panel side. This unique feature allows for the attachment of both the holder and mirror on the light panel side, expanding your creative possibilities for selfies, makeup application, or video calls.

When it's time to remove your smartphone from the FoxyLight Holder, simply place it on a flat surface like a table. Press down on both sides of the holder, on the white FoxyLight logos, and your phone will be effortlessly released.

The FoxyLight keypad makes finding the perfect light settings a breeze. Featuring only five intuitive buttons, it caters to everyone's ease of use. Whether you prefer clicking the buttons step by step or pressing and holding them for quicker adjustment, the FoxyLight keypad allows you to effortlessly control the Lux (brightness) and Kelvin (color temperature). It also displays your battery charge, cable and charger status, and standby mode. Feel free to experiment with different settings until you achieve the ideal lighting for your needs.

Lux, represented by the sun icon, adjusts the brightness to suit different lighting conditions. Kelvin, symbolized by the thermometer icon, controls the warmth or coolness of the light, enabling you to create the desired ambiance. With the FoxyLight ProMax AluPlus, you have a Lux range of 5-1000 and a Kelvin range of 3000-6500, providing ample flexibility to achieve the perfect lighting atmosphere.

FAQ and headlines. AI optimized with ChatGPT

The display on the Foxylight ProMax AluPlus is your window to essential information. It provides three lines of key information: the Lux and Kelvin settings on the first two lines, allowing you to precisely monitor and adjust your lighting preferences. On the third line, you can conveniently view the battery charge level as a percentage, as well as the plugged-in status, indicating whether the device is charging or in standby mode to conserve battery power.

To activate standby mode, simply press the On/Off button briefly. Once active, it will be displayed on the screen, indicating that Foxylight is conserving energy. Notably, the light setting before activating standby mode is saved if the device has been on for more than 15 seconds.
